

ADDITIVES

Acelenet

SETTING ACCELERATOR FOR MORTARS

Product created to accelerate the setting and hardening of concrete and mortar, increasing its strength even at very low temperatures. Free of corrosive substances in its composition. It is used in mass or reinforced concrete when it is necessary to shorten the setting time or maintain it at low temperatures.

APPLICATIONS

Mass or reinforced concrete

Concrete pipes and blocks

Concrete work at low temperatures

FEATURES

- 01 Reduces setting start and end times at any temperature
- 02 Much shorter hardening time
- 03 Especially recommended for mass concrete, pipes, and blocks
- 04 Provides antifreeze effect in mass concrete
- 05 Free of corrosive substances

DIRECTIONS FOR USE

Acelenet is added along with the mixing water. The dosage depends on the desired effect, temperature, and type of cement.

TECHNICAL DATA

Appearance	Cloudy colorless liquid
Density (20 °C)	1.3 g/cm ³
Solubility in water	Total
pH	9 ± 1

PRODUCT DATA

COVERAGE

Recommended dosage: 0.8 % to 2 % based on the weight of cement.

SAFETY

Do not ingest. Safety data sheet available to professional users upon request.

S2 Keep out of reach of children.
